

Module-6: Ansible Assignment - 4

You have been asked to:

Use the previous deployment of the Ansible cluster

Configure the files folder in the role with index.html which should be replaced with the original index.html

All of the above should only happen on the slave which has nginx installed using the role

Answer:

```
aravi@kube-cntrl:/etc/ansible$ cat roles/nginx/tasks/main.yml
---
- name: Update apt cache
  ansible.builtin.apt:
    update_cache: yes

- name: Install Nginx
  ansible.builtin.apt:
    name: nginx
    state: present

- name: Start Nginx service
  ansible.builtin.systemd_service:
    name: nginx
    state: started
    enabled: true

- name: Copy index.html File
  ansible.builtin.copy:
    src: /etc/ansible/roles/nginx/files/index.html
    dest: /usr/share/nginx/html/index.html

aravi@kube-cntrl:/etc/ansible$ cat roles/nginx/files/index.html
<h1>This is the Custom Page </h1>
```

RE-run the playbook from Assignment-3 it will copy the index.html file.
